UNIVERSIDAD TECNOLÓGICA DE PANAMÁ

Informe Sustantivo de Misión Oficial en el Exterior

Nombre del funcionario (a):	VLADIMIR VILLARREAL C.	Cédula:	4-717-1296
Cargo	DOCENTE	Nº Planilla:	20
Fecha de la Misión	30 noviembre al 5 diciembre	Desde:	30 de noviembre de 2015
Nº Cheque:	111963	Monto:	B/. 2,250.00
País:	CHILE		
Misión oficial:	PRESENTAR ARTÍCULO EN CONGRESO UCAMI, IWAAL & AmIHealth 2016		

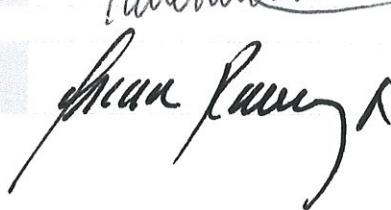

INFORMACIÓN SUSTANTIVA

Objetivo de la participación:	Presentar el artículo titulado: Mobile Monitoring Review: Comparative with MoMo Framework Solution y reunión de la Asociación para la Inteligencia Ambiental.
-------------------------------	---

Resultados (valor agregado en el desempeño de su cargo):	<ul style="list-style-type: none">• Presentación de artículo ante la comunidad científica publicado en Springer LNCS.• Se negoció la posible organización de UCAMI en el 2017 en Panamá.• Se presentó el proceeding como Editor de la primera versión de AmIHealth.• Se desarrolló una reunión con grupos de investigación para proyecciones de proyectos de investigación. La Universidad de Murcia propone el desarrollo de un proyecto de la Unión Europea llamado Erasmus+ para que la UTP participe en este proyecto.

Abstract. The systematic review allows us to identify, assess, and interpret all possible relevant work associated with a question in particular or subject of an area. In this paper we will use the Kitchenham protocol, which allow for the proper selection of primary and secondary research related to mobile monitoring solution. The main objective of this review is to identify work, research and publications made in the field of mobile monitoring of patients through a framework or application generators. Next, we compare the different solutions with our solution: MoMo Framework. Our systematic review is based on the methodology B. Kitchenham. She proposes specific guidelines to carry out the systematic review in software engineering.

Keywords. Mobile monitoring, systematic review, ubiquitous computing, m-health.

1 Introduction

The systematic review allows us to identify, assess, and interpret all possible relevant work associated with a question in particular or subject of an area. For them we will use some techniques or protocols [1] that you allow us the proper selection of primary and secondary research related to mobile monitoring solution. The main objective of this review is to identify work, research and publications made in the field of mobile monitoring of patients through a framework or application generators. She proposes specific guidelines to carry out the systematic review in software engineering.

The proposal is based on similar guidelines for researchers with the objective to reuse the knowledge and experience of a known and consolidated area of research. The main intention with the guidelines is introduce the concept of a rigorous review of current empirical evidence to the software engineering community. There are several characteristics that differentiate a systematic review of a conventional literature review:
